

AMENDMENTS TO THE SPECIFICATION

In the Specification

Please **AMEND** Paragraph [0062] as follows:

[0062] The pixel electrodes 190 and the second passivation layer 802 cover an entire surfaces of the color filters 230R, 230G and 230B such that the color filters 230R, 230G and 230B are prevented from being damaged by following processes and from contaminating overlying layers and the LC layer 3. However, the second passivation layer 180 802 overlaps the pixel electrodes 190 only near the boundaries of the pixel electrodes 190 and most portions of the pixel electrodes 190 are disposed directly on the color filters 230R, 230G and 230B such that the second passivation layer 802 does not decrease the light transmittance passing through the pixel electrodes 190.
